Layer2
CLOUD CONNECTOR V6
for Office 365 and SharePoint

COMPATIBLE WITH
SharePoint 2016 · SharePoint Online · SharePoint 2013
SharePoint 2010 · SharePoint Foundation

SharePoint   **Office 365**

Features & Benefits

The Layer2 Cloud Connector closes gaps and solves issues that still exists with local file share migration and integration in Microsoft Office 365, SharePoint and OneDrive via the Microsoft OneDrive for Business standard client:

- The connector offers a general approach for data migration, integration and synchronization on-premises-to-cloud but also cloud-to-cloud that includes file share data as just one option.

- Several data sources supported: Files on local discs, file server shares. OneDrive, Google Drive, DropBox, Box.Net and others via synced local copy.

- No limitation regarding number of files to sync: The SharePoint list view threshold issue (>5.000 / 20.000 files) does not apply to sync.

- Many known migration / integration issues automatically solved: File name conventions, path length limitations. Forbidden file types zipped.

- Flexible filters supported on source and destination, e.g. on folders or for file types.

- One-way sync (migration or backup) and two-way sync (permanent hybrid integration) supported.

- Flexible field/column mapping to add metadata.

- Can sync files – or just metadata and link back.

- Several replication conflict stratgies offered. Flexible logging and alerting. Central connection mangement in Windows MMC.

- Secure data connection and transfer: The connector runs on a server or client inside the corporate network with Internet connectivity available, or in the cloud. No data is exposed to any 3rd party. Connections secured by SSL/HTTPS.

- High performance: Works great with large data sets.

- File migration / integration is just one option: 100+ data sources supported for direct connection and codeless no-touch sync.

> *"Brilliant tool, e.g. for replicating local files to a Sharepoint Online library. The assistance I received from Layer2 was outstanding. We are signing up as a partner and deploying to other clients using SharePoint Online."*
